

### Dental Providers Who Saw Medicaid Clients in FY 2008

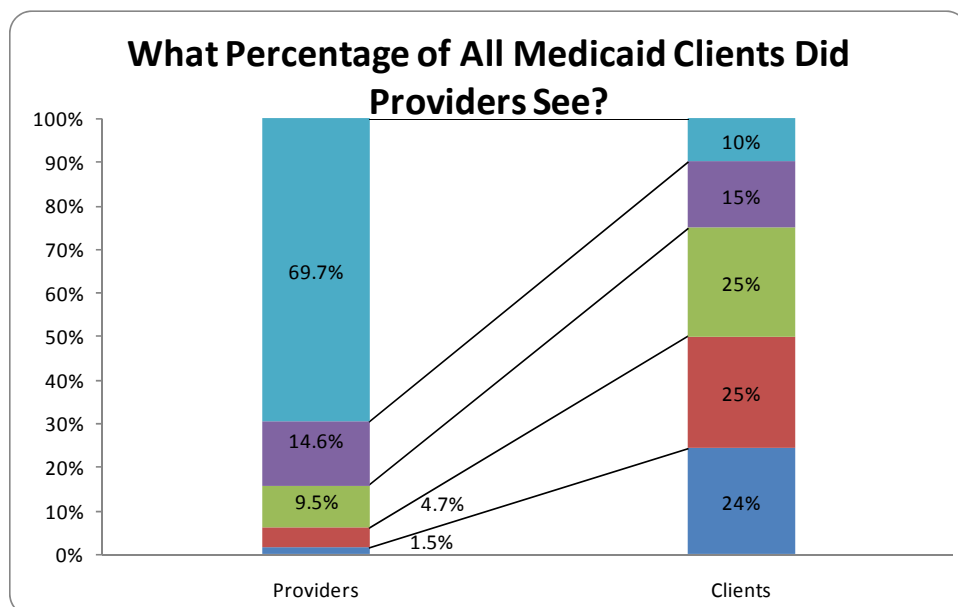

FY 2008 Medicaid billing showed that 597 dentists or dental clinics helped with at least 1 of 99,600 Medicaid claims. Of those 597 providers, 42% or 249 providers saw at least 1 Medicaid client per week (52 per year). This is depicted in the chart below.

In FY 2007, 40% or 244 of 615 providers saw at least 1 of 93,200 Medicaid clients per week. From 2007 to 2008 the number of licensed dentists in Utah changed by 1 (1,868 to 1,867).

The table below illustrates what percentage of the 597 dental providers saw 25%, 50%, 75% and 90% of all Medicaid clients. The numbers show the following:

- 9 or 1.5% of all providers saw 24% of all Medicaid clients
- 37 or 6.2% of all providers saw 50% of all Medicaid clients
- 94 or 15.7% of all providers saw 75% of all Medicaid clients
- 181 or 30.3% of all providers saw 90% of all Medicaid clients
- 416 or 69.7% of all providers saw the remaining 10% of Medicaid clients

In FY 2007 the same number of providers (9, 37, 94, & 181) saw the same percentage of Medicaid clients within 1% for all percentages of listed above (25%, 50%, 75%, & 90%).

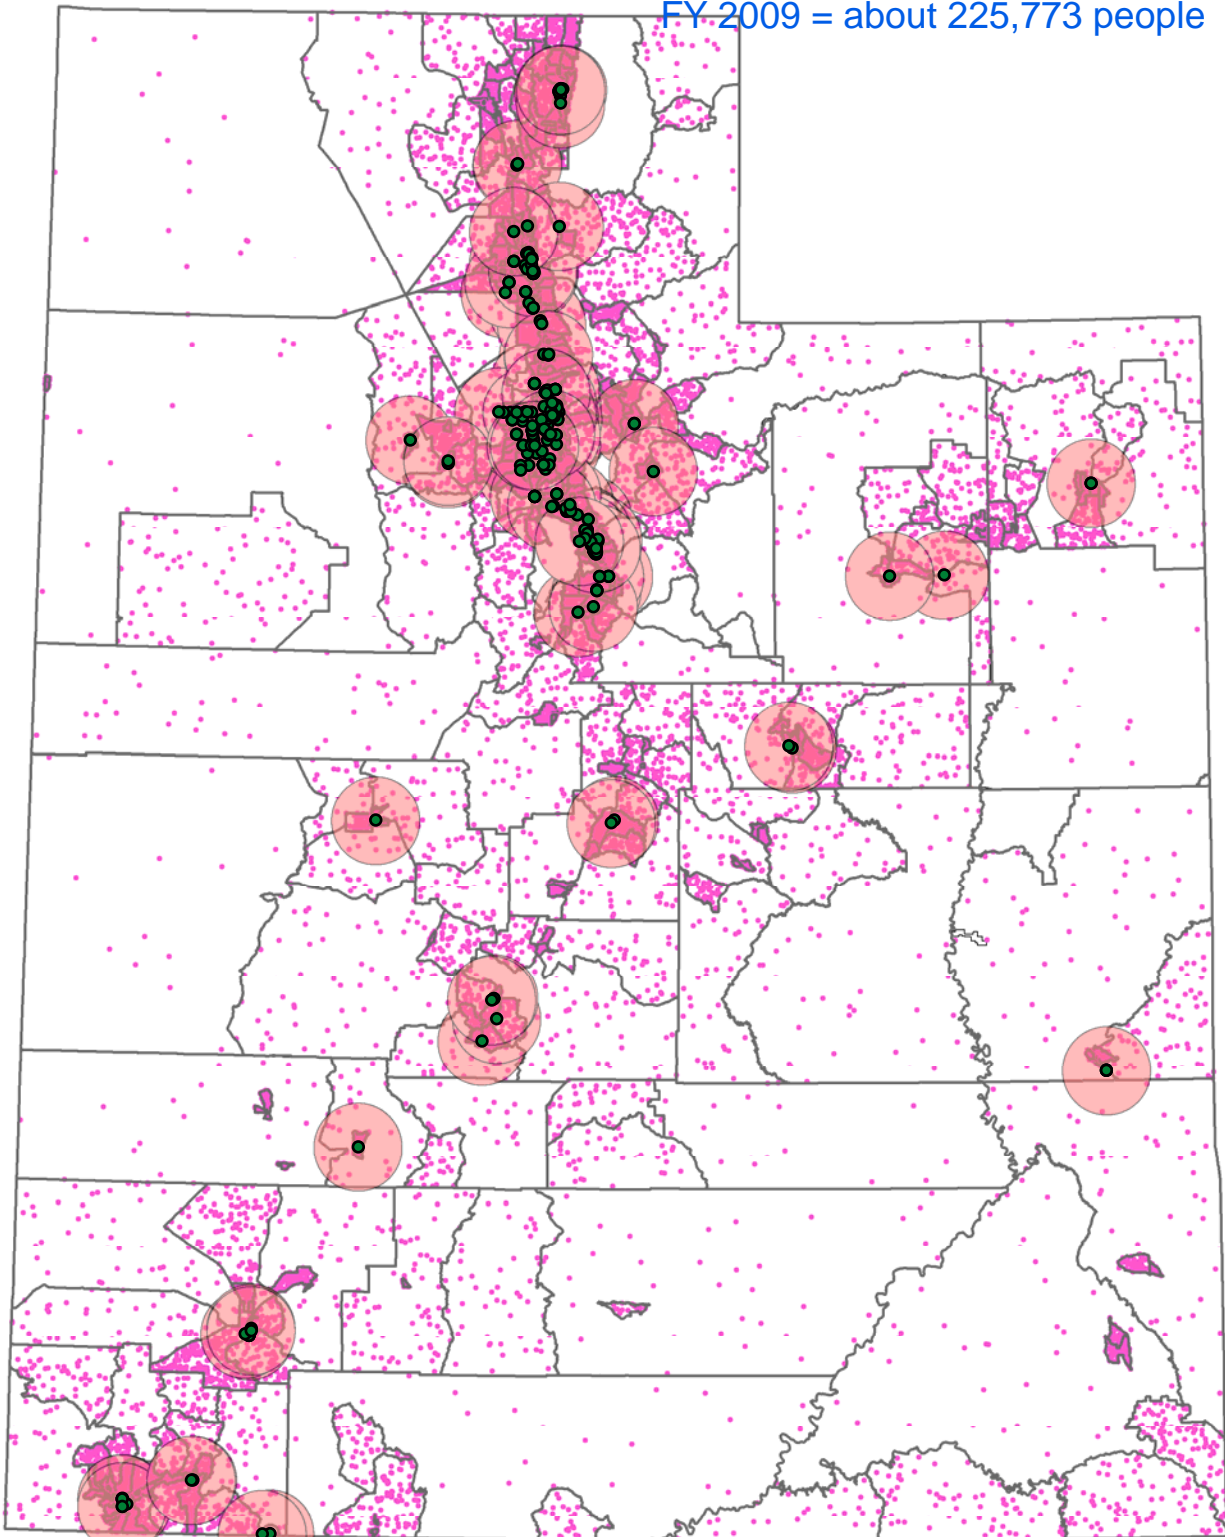

**Who are the 37 dental providers serving 50% of all Medicaid clients?** A quick analysis shows that of these 37 providers 6 or 16% are clinics with the other 31 or 84% being individual practitioners. Thirty-three of the 37 providers practice in the counties of Utah, Salt Lake, Weber or Davis.

**Statewide distribution:** In 2008 221,513 or 8.0% of Utah residents lived 10 or more miles away from a Medicaid dental provider.

## FY 2008 Dental Providers And Population

FY 2008 = about 221,513 people

FY 2009 = about 225,773 people

### Notes

- Green dots represent dental providers seeing at least one Medicaid client per week
  - Red circles around the green dots represent a 10 mile radius around the dental providers
  - Purple dots are density plots of population with 1 dot equalling 25 persons
